

ABSTRACT

A personal medical records retrieval system that allows a person to access their personal medical records from a remote medical records database 24 hours a day, 365 days a years from locations throughout the world. The remote medical records database has an Internet website and the person has a personalized access code for viewing his medical records from the database over the Internet. The database has a Firewall security and privacy/pirating protection system. A personalized access code can only be obtained by becoming a subscribing member to the personal medical records retrieval system. A subscriber may also receive a Smart Health Card that has a small computer (in the form of a computer chip with a memory embedded in it) that contains a person's medical history that can be read on a card reader in a physician's office, in a hospital, in emergency vehicles and any other place that is equipped with a card reader. The subscriber also receives a medical passport into which is inserted the Smart Health Card and it further comprises a CD-ROM disc that has a person's complete medical records on it and the disc can be read on any PC or laptop computer with proper authorization.
